

volzElektro PTFE 11200-250

volzElektro PTFE 11200-250 is a static dissipative, PTFE-coated glass fabric with a high-performance, silicone pressure-sensitive adhesive on one side. The PTFE surface has good release properties at high temperatures. The product has a yellow corrugated liner to protect the adhesive surface. volzElektro PTFE 11200-250 is intended for platen and element covers in a variety of industries, and for lining chutes and other feed mechanisms where static dissipative or black finish is required.

Nominal Values

1

volzElektro PTFE 11200-250

Applications

- Platen and element covers
- Lining chutes and other feed mechanisms where static dissipative or black finish is required

Benefits

- Thermally stable from -73 to +260°C
- Excellent release properties
- Resistant to tears, punctures and abrasion
- Excellent non-stick performance

Storage Conditions

The Rolls should be stored in their packaging protected from light and at a temperature between 15°C to 24°C, with a relative humidity of 50% +/- 30%. When using an adhesive tape stored below 15°C, it is advisable to keep the tape at room temperature for 24 hours to preserve its characteristics.
